~~Inductive And Deductive Reasoning~~

Deductive reasoning depends on facts and evidence; inductive reasoning

looks at patterns. Deductive reasoning

provides solid, repeatable conclusions.

Inductive reasoning makes general,

most probable conclusions about

evidence that has been observed.

Inductive reasoning may not always

have strong conclusions on the validity

of its hypothesis.

Using deductive reasoning, a researcher tests a theory by collecting and examining empirical evidence to see if the theory is true. Using inductive reasoning, a researcher first gathers and analyzes data, then constructs a theory to explain her findings. Within the field of sociology, researchers use both approaches.

Now before answering that, let's just think about what inductive reasoning is and what deductive reasoning is. Inductive reasoning is looking for a pattern or looking for a trend. So it's looking for a trend or a pattern and then generalizing. You could imagine, it's kind of extrapolating the information you have, generalizing.

The main difference between inductive and deductive reasoning is that inductive reasoning aims at developing a theory while deductive reasoning aims at testing an existing theory. Inductive reasoning moves from specific observations to broad generalizations, and deductive reasoning the other way around.
