the history of anthropology. Sigmund Freud (1856–1939) was an Austrian neurologist and the father of psychoanalysis, a clinical method for treating psychopathology through dialogue between a patient and a psychoanalyst. In creating psychoanalysis, Freud developed therapeutic techniques such as the use of free association and discovered transference, establishing its central role in the analytic process. Freud's redefinition of sexuality to include its infantile forms led him to formulate the Oedipus complex as the central tenet of psychoanalytical theory. His analysis of dreams as wish-fulfillments provided him with models for the clinical analysis of symptom formation and the mechanisms of repression as well as for elaboration of his theory of the unconscious.

Through revisiting and challenging what we think we know about the work of Edward Burnett Tylor, a founding figure of anthropology, this volume explores new connections and insights that link Tylor and his work to present concerns in new and important ways. At the publication of *Primitive Culture* in 1871, Tylor was at the centre of anthropological research on religion and culture, but today Tylor's position in the anthropological canon is rarely acknowledged. Burnett Tylor, *Religion and Culture* does not claim to present a definitive, new Tylor. The old Tylor - the founder of British anthropology; the definer of religion; the intellectualist; the evolutionist; the liberal; the utilitarian; the avatar of white, Protestant rationalism; the Tylor of the canon - remains. Part I explore debates and contexts of Tylor's lifetime, while the chapters in Part II explore a series of new Tylors, including Tylor the ethnographer and Tylor the Spiritualist, re-writing the legacy of the founder of anthropology in the process. Edward Burnett Tylor, *Religion and Culture* is essential reading for anyone interested in the study of religion and the anthropology of religion.
