Much of the chronic and recurrent pain and discomfort that we all experience is psychologically induced. This psychologically induced pain is called TMS, or The Mindbody Syndrome. TMS most commonly affects the back, neck, and legs, but can affect any part of the body or organ system. Some common TMS disorders include headaches, irritable bowel syndrome, dyspepsia, gastroesophageal reflux disorder, carpal tunnel syndrome, plantar fasciitis, temporomandibular joint syndrome (TMJ), and fibromyalgia. Using today's popular lingo, TMS is a mindbody disorder \u2011 the symptoms arise from the mind and are experienced by the body. Thus, The Mindbody Syndrome is an appropriate title. With the information in this book, I am optimistic that you will be able to eliminate your pain, no matter where it is. You will do this with knowledge. Simply by changing how you think about the connection between your brain and body, you will begin to feel better. I will not be recommending oral medication, special exercises, surgery, injections, physical therapy, chiropractic manipulation, acupuncture, massage therapy or any other of the multitude of alternative therapies that have sprung up in an effort to combat the explosion of chronic and recurrent pain in our society. Just knowledge.

Differential Diagnosis and Management for the Chiropractor: Protocols and Algorithms, Third Edition covers the range of complaints commonly seen in daily practice, including neurologic, gastrointestinal, genitourinary, and cardiopulmonary. The Third Edition of this best selling reference maintains its goal of helping the practitioner evaluate a patient's complaint in the context of a chiropractor's scope of practice and is dedicated to providing the most current research regarding the recommendations for the use of evaluation and management tools.

What Do These Symptoms Have In Common? A very simple and straight forward answer to this complex question is that they all require a multi-faceted health care approach. There is not one single right answer or method when approaching these complex conditions. A team of health practitioners will offer you diverse methods and approaches that come from many different angles with each opinion complementing the next. Each individual may experience one or all of these symptoms, and by utilizing many methods and practitioners (each offering their unique professional opinion and approaches based upon research, experience and methods), patients may find relief. All, some, or none of this information can be right for you, as you are an individual. Whether you have tried medicine, naturopathy, acupuncture, chiropractic, physical therapy, massage, yoga, exercise, or nutrition, there is one method that stands out in my mind after years of working with individuals suffering with headaches, carpal tunnel or fibromyalgia: a team-approach that YOU find moves you toward health and away from a dis-ease state. Not one blood study, saliva test, doctor's opinion, or feedback test will give you that ONE answer. I have seen individuals embrace multi-facet approaches and move along the wellness spectrum to a better quality of health and life. And while I see individuals having measurable changes with other methods or modalities, the one method most embraced and the primary approach for continued support for those suffering with these conditions was ... Chiropractic. As my patients will tell you, I do not believe there is one right path but when utilizing multiple methods of Chiropractic techniques, working with other health care providers on concurrent care, and having a close communicative approach with each individual, my patients receive measurable results that many times exceeds my expectations as well as theirs. I am happy to share the insights of this book and invite you to open yourself to the many healing possibilities there for you. Never give up hope - for your health now and into the future! Yours In Health, Dr. David M. Warwick
