An examination of social imaginary surrounding Thai kingship and Thainess that yield an intriguing amalgam of ideas concerning popular religion, Buddhist kingship, nationalism, and material culture. It explores the contemporary appeal of King Chulalongkorn and considers what this ruler's unprecedented popularity says about Thai society.

King Bhumibol Adulyadej of Thailand is the world's longest reigning monarch. Indeed, his 65-year reign is one of the longest in world history, an achievement few would have predicted when the Thai king acceded the throne after the mysterious death of his brother in 1946. How did King Bhumibol revive the sinking fortunes of the Thai monarchy? Why has he become arguably the most revered king in Thai history? This illustrated biography tells that remarkable story. Beginning with an introduction explaining the unique history and traditions of the Thai monarchy, *King Bhumibol Adulyadej: A Life's Work* offers a fresh and insightful account of his life, from his birth in America and education in Europe to his unexpected accession to the throne. Following him through the Cold War and Indochina War periods, the book shows how the king has used his position to help develop the

country and its people while at the same time securing the status of the monarchy itself. King Bhumibol Adulyadej: A Life's Work also includes insightful chapters on the often-misunderstood institutions that support the crown - the Crown Property Bureau and Privy Council - as well as essays on the controversial lèse-majesté law and the issue of succession.

The Asian monsoon region is one of these areas where consecutive years of droughts are causing severe problems for the lives and livelihoods of the communities. This book outlines the characteristics and challenges of the Asian monsoon drought and highlights innovative solutions and approaches undertaken in different parts of the region.

The practical, user-friendly guide to creating a sustainable future for destinations in developing economies Community Destination Management in Developing Economies is a user-friendly guide that provides a comprehensive view of the issues facing planners, policymakers, and destination managers who attempt to ensure a sustainable future for community destinations in developing economies. Travel and tourism experts from a wide range of disciplines discuss illustrative case studies and effective practical approaches for various facets of destination management. This book explains in detail the complex task of destination management, making the needed basic knowledge and skills understandable to all readers. Community Destination Management in Developing Economies is divided into three sections. The first section provides a basic introduction to community tourism destination management with a special emphasis on community participation and practical case studies. The second section reviews the basic tools essential for managing destinations, such as Environmental Impact Assessments (EIA), Geographic Information Systems (GIS), remote sensing technologies, good governance, and carrying capacity. The final section provides a wide range of illuminating case studies designed to illustrate both the conceptual issues discussed in the first part along with the tools developed in the second part. The book is extensively referenced and has several helpful figures, tables, and photographs to clarify concepts and topics. Community Destination Management in Developing Economies topics include: the principles of sustainable tourism product marketing and development financing destination planning organizational structure and management destination site management and operations the nature of tourism participation of the community in development projects Environmental Impact Assessments (EIA) Geographic Information Systems (GIS) remote sensing technology historic resource management the concept and application of good governance carrying capacity as a destination management tool preservation of heritage in tourism computer visualization technology festival and event tourism and more! Community Destination Management in Developing Economies is essential reading for urban planners and managers, tourism planners, economic development officials, politicians and policymakers working at the local level, consultants working in developing economies, officials

from aid agencies and development banks responsible for developing and approving development projects for tourism purposes, educators and students, and those without tourism planning and development training who need this specialized information.

Many farms in tropical countries suffer from droughts in the dry season and sometimes even in the rainy season. In order to significantly increase the capacity to store water, the grassroots Farmer Wisdom movement in Northeast Thailand innovated pond construction on homesteads. This Working Paper first documents how pond water is mainly used to irrigate crops and fruit trees, and is also used for livestock or fish, and for domestic uses, even if ample piped water is available. Households were also found to harvest rainwater from roofs; take water from canals and streams; lift water manually from shallow wells and with electric pumps from deep wells; channel run-off from roads to paddy fields; use precipitation as green water on fields; and buy bottled water. Most households combine at least six of these nine water sources. The second part describes scenarios and some outcomes of a new simulation model, BoNam. This model provides guidelines for the optimal size and site of such ponds according to biophysical factors (weather, soil and crops), socioeconomic factors (prices, availability of labor and off-farm income) and household aspirations.

Shifting cultivation is one of the oldest forms of subsistence agriculture and is still practised by millions of poor people in the tropics. Typically it involves clearing land (often forest) for the growing of crops for a few years, and then moving on to new sites, leaving the earlier ground fallow to regain its soil fertility. This book brings together the best of science and farmer experimentation, vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity. Some critics have tended to disparage shifting cultivation (sometimes called 'swidden cultivation' or 'slash-and-burn agriculture') as unsustainable due to its supposed role in deforestation and land degradation. However, the book shows that such indigenous practices, as they have evolved over time, can be highly adaptive to land and ecology. In contrast, 'scientific' agricultural solutions imposed from outside can be far more damaging to the environment and local communities. The book focuses on successful agricultural strategies of upland farmers, particularly in south and south-east Asia, and presents over 50 contributions by scholars from around the world and from various disciplines, including agricultural economics, ecology and anthropology. It is a sequel to the much praised "Voices from the Forest: Integrating Indigenous Knowledge into Sustainable Upland Farming" (RFF Press, 2007), but all chapters are completely new and there is a greater emphasis on the contemporary challenges of climate change and biodiversity conservation.
