[Ethnoarchaeology in Action] | By (author) David---

Ethnoarchaeology is the ethnographic study of peoples for archaeological reasons, usually through the study of the material remains of a society. Ethnoarchaeology aids archaeologists in reconstructing ancient lifeways by studying the material and non-material traditions of modern societies. Ethnoarchaeology also aids in the understanding of the way an object was made and the purpose of what it is being used for. Archaeologists can then infer that ancient societies used the same techniques as the

Ethnoarchaeology in Action concludes with ethnoarchaeology's contributions actual and potential, and with a look at its place within anthropology. It is generously illustrated, including many photographs of leading ethnoarchaeologists in action.

Ethnoarchaeology first developed as the study of ethnographic material culture from archaeological perspectives. Over the past half century it has expanded its scope, especially to cultural and social anthropology. Both authors are leading practitioners, and their theoretical perspective embraces both the processualism of the New Archaeology and the post-processualism of the 1980s and 90s. A case-study approach enables a balanced global geographic and topical coverage, including consideration of materials in French and German. Three introductory chapters discuss the subject and its history, survey the theory, and discuss field methods and ethics. Ten topical chapters consider formation processes, subsistence, the study of artefacts and style, settlement systems, site structure and architecture, specialist craft production, trade and exchange, and mortuary practices and ideology. Ethnoarchaeology in Action concludes with ethnoarchaeology's contributions actual and potential, and with a look at its place within anthropology. It is generously illustrated, including many photographs of leading ethnoarchaeologists in action.

Ethnoarchaeology in Action is the first and only comprehensive study of ethnoarchaeology, the ethnographic study of living cultures from archaeological perspectives, and is designed for senior undergraduates and above in archaeology and anthropology. Its geographical coverage is global and the book includes relevant theory, practical advice regarding fieldwork, and complete topical coverage of the discipline. Critical discussions of varied case studies make this a very readable book. It is illustrated with numerous figures and photographs of many leading ethnoarchaeologists in action.

Material culture - the objects made by man - provides the primary data from which archaeologists have to infer the economies, technologies, social organization and ritual practices of extinct societies. The analysis and interpretation ofmaterial culture is therefore central to any concern with archaeological theory and methodology, and in order to understand better the relationship between material culture and human behaviour, archaeologists need to draw upon models derived from the study of ethnographic societies. First published in 1982, this book presents the results of a series of field investigations carried out in Kenya, Zambia and the Sudan into the 'archaeological' remains and material culture of contemporary small-scale societies, and demonstrates the way in which objects are used as symbols within social action and within particular world views and ideologies.

People with Animals emphasizes the interdependence of people and animals in society, and contributors examine the variety of forms and time-depth that these relations can take. The types of relationship studied include the importance of manure to farming societies, dogs as livestock guardians, seasonality in pastoralist societies, butchery, symbolism and food. Examples are drawn from the Pleistocene to the present day and from the Altai Mountains, Ethiopia, Iraq, Italy, Mongolia and North America. The 11 papers work from the basis that animals are an integral part of society and that past society is the object of most archaeological inquiry. Discussion papers explore this topic and use the case-studies presented in other contributions to suggest the importance of ethnozoarchaeology not just to archaeology but also to anthrozoology. A further contribution to archaeological theory is made by an argument for the validity of ethnozoarchaeology derived models to Neanderthals. The book makes a compelling case for the importance of human-animal relations in the archaeological record and demonstrates why the information contained in this record is of significance to specialists in other disciplines.

Ethnoarchaeology of Shuwa-Arab Settlements demonstrates the imperative need for ethnoarchaeology to include a deep sense of the history of the specific social group under analysis for its findings to truly impact archaeological thinking. Based on research from a long-term archaeological and ethnoarchaeological project conducted in the northernmost part of Cameroon, Augustin Holl's new work probes the ethnic survival of the Shuwa-Arab descendants of generations of pastoralists who migrated from Arabia to the Chad basin. The book robustly engages macro issues connected to processes of sedentarization, ethnic interaction in a multi-ethnic setting, and relations of power and dominion. On the micro level the work deciphers clues for the cultural survival and later prosperity of the Shuwa-Arab hidden in the material record of their daily settlement life. This book will be of great interest to students of African history, African studies, archaeology, ethnoarchaeology, and ethnic and cultural studies seeking to understand how to successfully integrate history into the interpretation of the archaeological record.

Village Ethnoarchaeology: Rural Iran in Archaeological Perspective discusses selected tangible features of the subject area, noting the differences in households and associated material culture. The book comments among settlement variability, the complexities in relationships among population density, settlement age, area, and function. The text also deals with material correlates of sociocultural behavior, spatial organization, architectural variability, regional patterns, and archaeological sampling strategies. The book presents a study based on three sets of contemporary data: (1) from an ethnographic fieldwork on Aliabad in summer 1975; (2) the census and cartographic documents published by the Iranian government; and (3) a corpus of published comparative ethnographic data. The book notes that among the households in Aliabad, which is neither economically stratified nor markedly heterogeneous, economic variations exist. The text suggests that that material diversity and systems involving socioeconomic differentiation can have substantial time depth in this part of the world. The book can prove beneficial for archaeologists, anthropologist, sociologists, and researchers interested in ethnographic accounts of Middle Eastern communities.

Contesting Ethnoarchaeologies provides a systematic overview of major non-American traditions of ethnoarchaeology, with a particular focus on Europe and Asia. It explores all stages of their research agenda. These ethnoarchaeologies were embedded in theoretical traditions of local archaeologies. Moreover, ethnoarchaeological studies carried out in these different settings targeted a wide range of different issues and addressed numerous questions of covering all sorts of different issues. Consequently, achieved results and data have been largely idiosyncratic and hardly compatible. Hence, this volume aims not only to conceptualize characteristics of these diverse ethnoarchaeologies but more importantly put them in a broader context of the development of archaeology in different parts of Europe and Asia. The contributors to the volume express their own diverse views on the cognitive and interpretative value of ethnoarchaeology for studying prehistoric past, based on particular cases of experience and research. As such, the volume is not only a valuable overview of numerous ethnoarchaeological practices in different parts of the region, but also a significant contribution to the history of archaeological thought. This perspective shall make the book of wider applicability and make possible to put up ethnoarchaeology as an immanent and important element of archaeological theory.

Ash is an important and yet understudied aspect of ritual deposition in the archaeological record of North America. Ash has been found in a wide variety of contexts across many regions and often it is associated with rare or unusual objects or in contexts that suggest its use in the transition or transformation of houses and ritual features. Drawn from across the U.S. and Mesoamerica, the chapters in this volume explore the use, meanings, and cross-cultural patterns present in the use of ash, and highlight the importance of ash in ritual closure, social memory, and cultural transformation.

In this book, Marvin Harris presents his current views on the nature of culture addressing such issues as the mental/behavioral debate, emics and etics, and anthropological holism.

The last three decades have witnessed a period of growing archaeological activity in Greece that have enhanced our awareness of the diversity and variability of ancient communities. New sites offer rich datasets from many aspects of material culture that challenge traditional perceptions and suggest complex interpretations of the past. This volume provides a synthetic overview of recent developments in the study of Neolithic Greece and reconsiders the dynamics of human-environment interactions while recording the growing diversity in layers of social organization. It fills an essential lacuna in contemporary literature and enhances our understanding of the Neolithic communities in the Greek Peninsula.
