This was GE's first major turbofan engine for commercial aviation, and was derived from the company's large TF-39 turbofan that powered the Lockheed C-5A. The CF6-80 series are high-bypass turbofan engines with a thrust range of 48,000 to 75,000 lb (214 to 334 kN). Overall pressure ratio is 30.4, with a bypass ratio of 5.15.

general electric cf6 - semaphores-int.com

Four uncontained failures of CF6-45/50 engines in the preceding two years prompted it to issue an "urgent" recommendation to increase inspections of the engines on U.S. aircraft : none of the four incidents of rotor disk imbalance and subsequent failure resulted in an accident, but parts of the engine did penetrate the engine housing in each case [19]

General Electric CF6 - WikiMili, The Best Wikipedia Reader

After developing the TF39 for the C-5 Galaxy in the late 1960s, GE offered a more powerful variant for civilian use, the CF6, and quickly found interest in two designs being offered for a recent Eastern Airlines contract, the Lockheed L-1011 and the McDonnell Douglas DC-10. Lockheed eventually selected the Rolls-Royce RB211, but Douglas stuck with the CF6 and the DC-10 entered service in 1971.

General Electric CF6 - Wikipedia

CF6-80C2 . Group: Turbofan Engines. Status: Active. Also known as: CF6-80C2-B1F, CF6-80C2B5F, CF6-80C2B7F and F108-GE-100 (military designation?) Origin: Contractor/s: GE Aviation. Initial Operational Capability (IOC): 1985. Unitary Cost: \$10.0 million. The CF6-80C2 emerged from CF-6080A engine featuring higher thrust and more efficient slightly larger fan.

Ancile

The CF6-80A and -80C2 engines are known for their high reliability, and this was evident during extended twin operations (ETOPS) testing. Both engines received 180-minute ETOPS approval on the Boeing 767, and the CF6-80C2 engine received 138-minute ETOPS approval on the A300 and A310 aircraft that allowed twin-engine aircraft operations over large bodies of water.
