Simply speaking, a shadow is an absence of light. If light cannot get through an object, the surface on the other side of that object (for example, the ground or a wall) will have less light reaching it. A shadow is not a reflection, even though it is often the same shape as the object. Explore topics.

Light and shadows — Science Learning Hub

"The thing about the shadows is that they're not all darkness. You need to have light to have shadows. Just look for it." After how the first part of the series ended I just HAD to know how the story of Maggie and Clay would continue.

Light in the Shadows by A. Meredith Walters

Formation of Shadows. To form a shadow a source of light is required. It is only when light rays are obstructed we get the shadow of the object. The size of the shadow keeps on changing with the position of the sun. Shadows are always formed on the opposite side. Transparent objects cannot form a shadow.

But a shadow also implies the presence of light. Shadows form when something gets in the way, blocking the light. Our experiences of shadow aren ' t limited to the physical world; they can carry into...

Light and Shadow | Psychology Today

Shadows. When an object is placed in front of a source of light, it produces a shade or dark area behind it. Shadows are formed when light is stopped by an object. An opaque objects stops the light completely, so an opaque object casts a dark shadow behind it. A translucent objects stops the light partially ,so a translucent object casts a weak shadow.

Light and Shadow | Class 6, Light Shadows and Reflection

A shadow is a dark (real image) area where light from a light source is blocked by an opaque object. It occupies all of the three-dimensional volume behind an object with light in front of it. The cross section of a shadow is a two- dimensional silhouette, or a reverse projection of the object blocking the light.

Shadow — Wikipedia

The terminator, or ' bedbug line ' , is the area where the form transitions from light into shadow. It occurs where the light rays from the source are tangent to the edge of the form. If it ' s a soft, indirect light, the transition from light to shadow at the terminator will be more gradual. The form shadow begins just beyond the terminator.
