This book is about the gender dimensions of natural resource exploitation and management, with a focus on Asia. It explores the uneasy negotiations between theory, policy and practice that are often evident within the realm of gender, environment and natural resource management, especially where gender is understood as a political, negotiated and contested element of social relationships. It offers a critical feminist perspective on gender relations and natural resource management in the context of contemporary policy concerns: decentralized governance, the elimination of poverty and the mainstreaming of gender. Through a combination of strong conceptual argument and empirical material from a variety of political economic and ecological contexts (including Cambodia, China, Indonesia, Malaysia, Nepal, Thailand and Vietnam), the book examines gender-environment linkages within shifting configurations of resource access and control. The book will serve as a core resource for students of gender studies and natural resource management, and as supplementary reading for a wide range of disciplines including geography, environmental studies, sociology and development. It also provides a stimulating collection of ideas for professionals looking to incorporate gender issues within their practice in sustainable development. Published with IDRC.

Tremendous optimism prevails around bottomup accountability — a situation in which citizens effectively hold their government to account. This contrasts with top-down accountability, whereby higher tiers of governments, donors, or nongovernmental organizations (NGOs) fulfill this role by restraining, monitoring, and rewarding or sanctioning government. Bottom-up accountability can involve direct citizen participation (often involving efforts to provide them information, voice, and involvement in policymaking) or can be mediated through civil society organizations (CSOs) that monitor and potentially reward or sanction government. A large variety of different types of CSOs exist, distinguished both by their organizational purpose and the composition of their membership, possibly with different willingness and ability to hold government accountable.

Covers the challenges of implementing Oxfam's innovative gender policy: of promoting gender-aware development and emergency work; of influencing organisational culture and of working with the international women's movement to promote gender equality.

Advances the critical dialogue on the importance of women in international peace and security. Points out the importance of women in building and keeping peace. Brings together diverse voices from diplomats to military officials and from human rights activists to development professionals. "

Sisterhood Agenda uplifts and aids in the self-development of women and girls. 345 Activities of SisterCamp is the ultimate summer program for girls, designed to empower girls ages 4-15 through self-development, learning, and fun. SisterCamp is a popular and exciting multi-purpose summer enrichment program implemented by Sisterhood Agenda and shared with its many partner agencies around the world. More than a recreation-based summer camp, 345 Activities of SisterCamp includes a detailed of set of engaging strategies focused on: sisterhood, affirmations, life skills, athletics, self-esteem, technology, field trips, arts & crafts, and drama. A sample calendar of SisterCamp activities is included. For effective program implementation, Sisterhood Agenda offers SisterCamp training for you and your agency.

This publication aims to help policy-makers, project designers and field practitioners to conceptualize the nexus between gender equality and food loss while offering practical guidance on and tools for integrating gender concerns into the planning and implementation of food loss studies and reduction strategies and interventions. By linking key concepts from gender-sensitive value chain development and the issue of food loss, it emerges that gender inequalities affect the overall efficiency of the food value chain and generate a poor performance that may cause produce to be removed from the chain. The publication provides critical information and entry points for food loss reduction interventions that improve the way women and men participate in and benefit from food production.

Sweetpotato and potato are expanding faster than any other food crops in sub-Saharan Africa. There is growing investment in research to address bottlenecks in value chains concerning these two crops, and growing interest from the private sector in investing in them. This book addresses five major themes on sweetpotato and potato: policies for germplasm exchange, food security and trade in Africa; seed systems; breeding and disease management; post-harvest management, processing technologies and marketing systems; nutritional value and changing behaviours.

Public Space in Informal Settlements: The Barrios of Bogotá contributes to the debate on informal settlements by viewing them as an opportunity to understand different ways of seeing and thinking about the city. Public spaces in informal settlements, like the housing stock, are to a large extent the product of local self-help and self-managed processes; however, the equivalent level of understanding has not been achieved, partly because such settlements are often seen as spare spaces with little value. Public spaces in informal settlements are public in terms of ownership and accessibility, but are communal in terms of use and attachment. They play an important role in the physical and social dynamics of the barrios, and have done since their inception; however, the improvement and consolidation of such spaces may not be realised for many years. The book will be of primary importance to architects, urban planners and researchers who are interested in the city in general, and in informal settlements in particular. The book will also be of interest to those in the humanities and social sciences who are concerned with politics and postcolonial studies, and to academics working in people–environment studies and in the relationship between people and place in terms of place self-building, place attachment and place identity. However, the volume will be of most interest for Latin Americanists who do not read Spanish or Portuguese, and would like to know more about the region, the problems and the views, from the perspective of an insider with extended knowledge of the field.

These guidelines aim to respond to these questions and support practitioners in translating the Gender-Sensitive Value Chain Framework, developed by the Food and Agriculture Organization (FAO) into action (FAO, 2016a). Building on FAO's comparative advantage on gender in agriculture and food security, these guidelines are primarily intended to assist practitioners in designing and implementing interventions that provide women and men with equal opportunities to benefit from agrifood value chain development. They offer practical tools and examples of successful approaches to foster a more systematic integration of gender equality dimensions in value chain interventions in the agricultural sector and enhance the social impact of these interventions.

The agriculture sector in Sierra Leone accounts for 60 percent of GDP and 58 percent of total employment. More than 58 percent of the country's population live in rural areas and 86.1 percent of this population are engaged in smallholder subsistence agricultural production. Ten years of civil conflict and the Ebola epidemic in 2014 negatively affected food security and the country's overall socio-economic situation. The country is particularly vulnerable to extreme events such as food chain crises and natural hazards which have a direct impact on food security and livelihoods. This evaluation aims to identify lessons learned and provide strategic recommendations on how FAO programmes can

be better oriented in Sierra Leone. FAO's overall contribution to developmental challenges was assessed in the priority areas defined in the CPFs covering 2012–16 and 2017–19. The evaluation comprised an examination of associated outcome areas related to support to smallholder commercialization, natural resources management, and effective response to disasters and increasing social productivity and resilience. The review also evaluated crosscutting issues, including gender equality and women's empowerment, climate resilience, nutrition, capacity development and youth employment. The evaluation used different methods to collect the views of the beneficiaries and other stakeholders, such as structured focus group discussions, structured key informant interviews, direct observation, and workshops. The fieldwork took place with actors from projects across five districts: Bo, Bombali, Kenema, Kono, and Port Loko. The evaluation found evidence of significant and sustainable results in a range of areas of FAO's activities, including policy-related work, from adoption of legislation to policy influence, piloting of approaches, and standards and regulatory frameworks. Likewise, results leading to livelihoods improvements, empowerment and adoption of more sustainable organizational practices, technologies and skills were found. Nevertheless, the programme failed to aggregate activities and interventions in a programmatic and coherent portfolio. FAO's capacity to deliver sustainable and consistent results, with strong partnerships and complementary action, was often undermined by lack of, or weak systems and functions. FAO should use the development of the new CPF as a way to re-design its strategic footprint in the country and reach its full potential, despite the limiting factors. To do this, FAO could consider adopting an area-based approach, implementing a programmatic, multi-stakeholder and cross sectoral adaptive approach based on regions/districts.
