"There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system--

The contributors to this volume undertake to establish the foundations and definitions of intergenerational justice and to explore its capacity to guide us in policy and public opinion judgments we must make to face unprecedented issues. . . . We are changing the biosphere and using resources to an extent never contemplated in the history of ethics. Deterioration of our oceans, loss of topsoil, insecurity about potable water supplies, the ozone hole, global warming, and the question about how to handle high-level nuclear waste which remains lethal perhaps 400,000 years from now, are some examples whose consequences reach far beyond inherited principles and policies of responsibility to others. This Handbook works to open a path for debate, extension of our tradition and invention of new thinking on these issues. Craig Walton, University of Nevada, Las Vegas, US More than a Handbook, this collection is a landmark work showing the way to a new ethics of intergenerational responsibility. It raises, in the most comprehensive way, the overarching ethical questions of our time. What are the rights of future generations? and How might present generations establish a philosophical foundation for its responsibilities to generations to come? . Peter Blaze Corcoran, Center for Environmental and Sustainability Education, Florida Gulf Coast University, US This important book provides a rich menu of history, current theory, and future directions in constitutional law, philosophy of rights and justice, and the relations of economics and politics to time, institutions, and the common good. It is enlivened by back-and-forth discussions among the authors (including some disagreements), as well as by applications to important contemporary issues such as climate change, nuclear waste, and public debt. Theoretic considerations are nicely balanced with examples of the means adopted in a number of countries to establish a legal foundation for protection of the quality of life for future generations. Neva Goodwin, Tufts University, US Do we owe the future anything? If so, what and why? Our capacity to affect the lives of future generations is greater than ever before, but what principles should regulate our relationship with people who don't yet exist? This Handbook offers a comprehensive survey of the key debates and pathbreaking accounts of potential ways forward both ethical and institutional. Andrew Dobson, The Open University, UK This Handbook provides a detailed overview of various issues related to intergenerational justice. Comprising articles written by a distinguished group of scholars from the international scientific community, the Handbook is divided into two main thematic sections foundations and definitions of intergenerational justice and institutionalization of intergenerational justice. The first part clarifies basic terms and traces back the origins of the idea of intergenerational justice. It also focuses on the problem of intergenerational buck-passing in the ecological context; for example in relation to nuclear waste and the greenhouse effect. At the same time, it also sheds light on the relationship between intergenerational justice and economics, addressing issues such as public debt and financial sustainability. The innovative second part of the volume highlights how posterity can be institutionally protected, such as by inserting relevant clauses into national constitutions. Reading this volume is the best way to gain an overall knowledge of intergenerational justice an extremely salient and topical issue of our time. The Handbook is an important contribution to the literature and will be of great interest to academics and graduate students as well as readers interested in wider human rights issues.

Over the past few decades, India has experienced a sudden and spectacular urban transformation. Gleaming business complexes encroach on fields and villages. Giant condominium communities offer gated security, indoor gyms, and pristine pools. Spacious, air-conditioned malls have sprung up alongside open-air markets. In Landscapes of Accumulation, Llerena Gulu Searle examines India's booming developments and offers a nuanced ethnographic treatment of late capitalism. India's land, she shows, is rapidly transforming from a site of agricultural and industrial production to an international financial resource. Drawing on intensive fieldwork with investors, developers, real estate agents, and others, Searle documents the new private sector partnerships and practices that are transforming India's built environment, as well as widely shared stories of growth and development that themselves create self-fulfilling prophecies of success. As a result, India's cities are becoming ever more inaccessible to the country's poor. Landscapes of Accumulation will be a welcome contribution to the international study of neoliberalism, finance, and urban development and will be of particular interest to those studying rapid-and perhaps unsustainable-development across the Global South.

Brad Ellis, a serious young American, and Lucy Beale, a servant at the boarding school where Brad's father is headmaster, find themselves aboard the "Basset" on a fantastical voyage into the realms of imagination.

As the surgical community steps up to tackle the global burden of surgical disease in developing countries, Global Reconstructive Surgery is the first reference of its kind to offer focused, pertinent coverage of key areas surgeons need to understand to fully participate in this endeavor. It provides authoritative, real-world guidance on common surgeries performed around the world to help optimize outcomes in difficult environments and for a variety of conditions. Offers practical wisdom and experience from surgeons who have lived and worked in challenging global settings. The clear, organized format is based on the way clinicians examine, prepare for, and treat patients in resource-limited circumstances. Each chapter matches the clinical pathway and thought processes of care delivery, from the clinical problem and pre-operative assessment to operative intervention, post-operative care, and possible complications and options for management. Covers perioperative management, cleft and craniofacial surgery, hand surgery, burns, trauma, and key techniques commonly performed by surgeons across the globe. Includes the surgical steps of each procedure, photographs of clinical cases, and surgical pearls for resource-poor settings. Discusses alternative approaches related to cultural considerations and unavailability of state-of-the-art equipment. Ideal for plastic surgeons, otolaryngologists, craniofacial surgeons, oral and maxillofacial surgeons, general surgeons - both those who volunteer for surgical trips and those training in local communities.

In 2015, the first pharmaceutical cocrystal was approved by the FDA. Since then, the number of cocrystals on the market and in the development pipeline has been slowly but steadily growing. It is now well established that cocrystals are a versatile new approach to oral drug formulation. This Reprint Book is a collection of articles that show the utility of pharmaceutical cocrystals and various aspects of cocrystal research: • Cocrystals as a strategy to modify the physicochemical properties of a drug such as dissolution behaviour, tableability, and melting point; • Development of new cofomers; • Screening studies for multiple cocrystal forms; • Cocrystals in nano-sized drug delivery.
