Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? *Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession* examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of *Measuring Human Capabilities* will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

The anatomy theater is where students of the human body learn to isolate structures in decaying remains, scrutinize their parts, and assess their importance. Taking a new look at the history of anatomy, the author places public dissections alongside private ones to show how the anatomical theater was both a space of philosophical learning and a place where students learned to behave in a civil manner towards their teachers, their peers, and the corpse.

OECD's Innovation Strategy calls upon all sectors in the economy and society to innovate in order to foster productivity, growth and well-being. Education systems are critically important for innovation through the development of skills that nurture new ideas and technologies.

Scholastic disputation, the formalized procedure of debate in the medieval university, is one of the hallmarks of intellectual life in premodern Europe. Modeled on Socratic and Aristotelian methods of argumentation, this rhetorical style was refined in the monasteries of the early Middle Ages and rose to prominence during the twelfth-century Renaissance. Strict rules governed disputation, and it became the preferred method of teaching within the university curriculum and beyond. In *The Medieval Culture of Disputation*, Alex J. Novikoff has written the first sustained and comprehensive study of the practice of scholastic disputation and of its formative influence in multiple spheres of cultural life. Using hundreds of published and unpublished sources as his guide, Novikoff traces the evolution of disputation from its ancient origins to its broader impact on the scholastic culture and public sphere of the High Middle Ages. Many examples of medieval disputation are rooted in

religious discourse and monastic pedagogy: Augustine's inner spiritual dialogues and Anselm of Bec's use of rational investigation in speculative theology laid the foundations for the medieval contemplative world. The polemical value of disputation was especially exploited in the context of competing Jewish and Christian interpretations of the Bible. Disputation became the hallmark of Christian intellectual attacks against Jews and Judaism, first as a literary genre and then in public debates such as the Talmud Trial of 1240 and the Barcelona Disputation of 1263. As disputation filtered into the public sphere, it also became a key element in iconography, liturgical drama, epistolary writing, debate poetry, musical counterpoint, and polemic. The Medieval Culture of Disputation places the practice and performance of disputation at the nexus of this broader literary and cultural context.
