Welcome to Text Mining with R | Text Mining with R

If you are new to text mining, but familiar with R dataframes rather than matrices, you will feel right at home. Even more so as tidytext fits into the 'tidyverse' way of performing tasks in R. No more struggling to adjust your workflow, you can text mine and summarise/ plot using dplyr & ggplot2 without breaking sweat.

Notes for "Text Mining with R: A Tidy Approach"

Extracting, processing, and analyzing this oasis of information becomes increasingly relevant for a large variety of research fields. This Methods Bites Tutorial by Cosima Meyer summarizes Cornelius Puschmann's workshop in the MZES Social Science Data Lab in January 2019 on advancing text mining with R and the package `quanteda`.

A document term matrix is an important representation for text mining in R tasks and an important concept in text analytics. Each row of the matrix is a document vector, with one column for every term in the entire corpus. Naturally, some documents may not contain a given term, so this matrix is sparse.
