the children in your care healthy; what disease and injury prevention practices you should follow; what disease and injury prevention practices you should require parents to follow; and what the most common childhood diseases and health conditions are, and how to recognize them, and what you can do when they occur.

Rev. ed. of: Practice guidelines for pediatric nurse practitioners / [edited by] Beth Richardson.

The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Managem.

Since publication of the fourth edition of this highly successful book, there have been a number of Government initiatives, reports and policies on how the health of children can best be protected and promoted. This revised fourth edition incorporates recent material on the National Service Framework, 'Every Child Matters', the public health report 'Choosing Health', and the Children Act. It has also been informed by new research on a variety of topics including Sure Start, obesity, Sudden Infant Death Syndrome (SIDS) and language acquisition. Health for all

Read Book Well Child Care Guidelines

Children 4/e (revised) continues the themes of previous editions, in particular highlighting the growing evidence that behavioural problems and educational failure are not inevitable, and can be prevented. Thus the role of screening for developmental problems, while not ignored, is set in the context of what can be done to promote language development, reading, and enthusiasm for learning. Changes made to the fourth edition, and continued in this revised edition, include dealing with the health care needs of children of school age as well as pre-school children. It also outlines the needs of special groups of children, including those who are vulnerable or disabled and those living in unusual circumstances. The legislative framework is outlined and hallmarks of good practice described. Promoting children's health is a key focus, with updated information on nutrition and injury prevention, and emphasis on the importance of parent education and support, language, and literacy skills, with a review of behavioural management programmes for parents. It also describes the duties laid on PCTs with regard to education and social services support. This established and successful book continues to be essential reading for all health professionals who work with children, whether in the community or at the receiving end of referrals. It will also provide vital background knowledge for those charged with the responsibility of planning, commissioning and monitoring. This revised fourth edition provides the most up to date evidence in a rapidly changing field.
